

Message "flutter run: No connected devices"

Asked 3 years, 11 months ago Active 8 days ago Viewed 462k times

I am trying to create a sample application with Flutter (fresh installation). [Android Studio](#) is also installed (fresh installation).

321

Here is the output of `flutter run`

46

`flutter run`
No connected devices.

The output of `flutter doctor` :

```
Doctor summary (to see all details, run flutter doctor -v):
[✓] Flutter (Channel beta, v0.1.5, on Linux, locale en_US.UTF-8)
[✓] Android toolchain - develop for Android devices (Android SDK 27.0.3)
[✓] Android Studio (version 3.0)
[!] VS Code (version 1.20.1)
[!] Connected devices
! No devices available
```

! Doctor found issues in 2 categories.

Is there a solution to this problem?

[flutter](#) [android-studio](#) [android-emulator](#) [ios-simulator](#) [flutter-run](#)

10 Do you have a device connected (USB debugging enabled) or an emulator running?

– [Günter Zöchbauer](#) Mar 1 2018 at 8:31

11 I had same problem, I've fixed by changing the USB Cable, because some cables are for power only.

1 2 Next

```
adb kill-server
adb start-server
```

4. Reconnect the Device and run following command again: `adb devices`

Now it should display *authorized*.

5. Ready to go.

Now, open your editor, Android Studio or Visual Studio Code, and check if your device is showing in *connected devices* or not.

You can simply check that with the `flutter doctor` command.

While using it in Windows 7, I had received an error: unable to install device drivers. And the device wasn't recognised.

0

You need to also install the Android OEM device driver for the particular device, just like mentioned [here](#).

I downloaded the driver for the device from the manufacturer's website and installed the driver from [Device Manager](#).

alter123

540 2 9 29

In my case

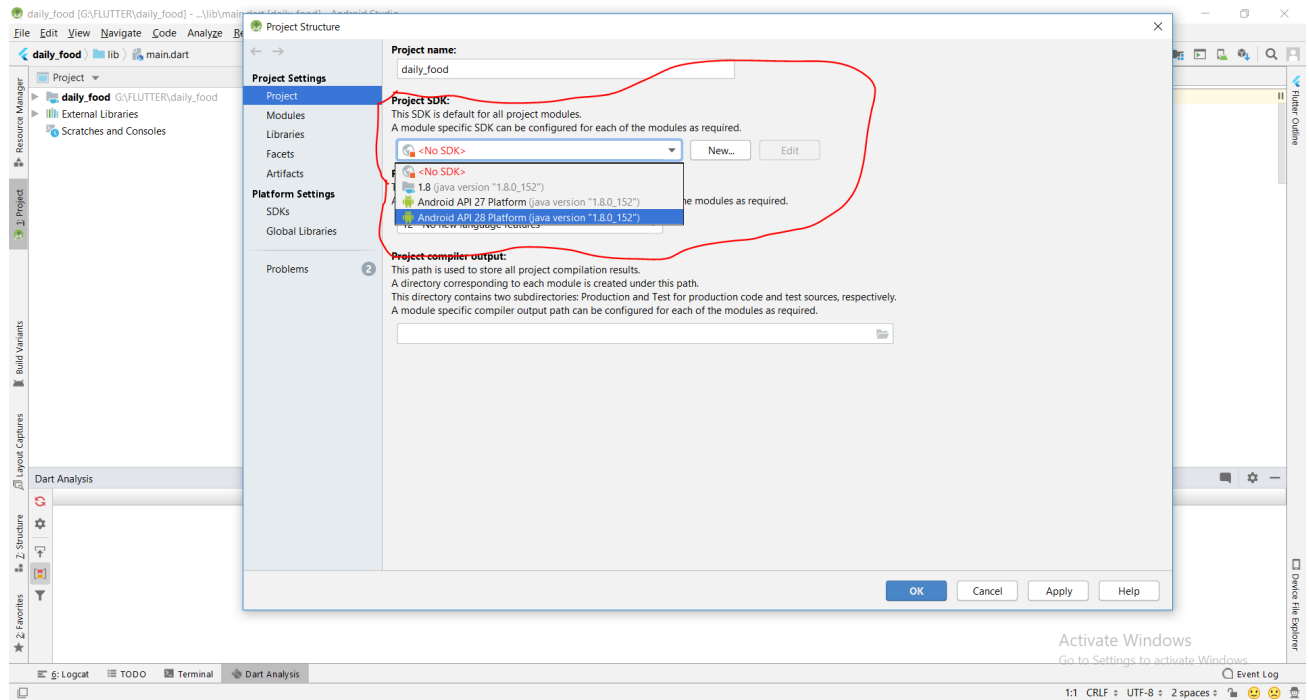

31

Menu *File* → *Project Structure*

Select the latest SDK:

**Muhaiminur Rahman****2,633** 18 25

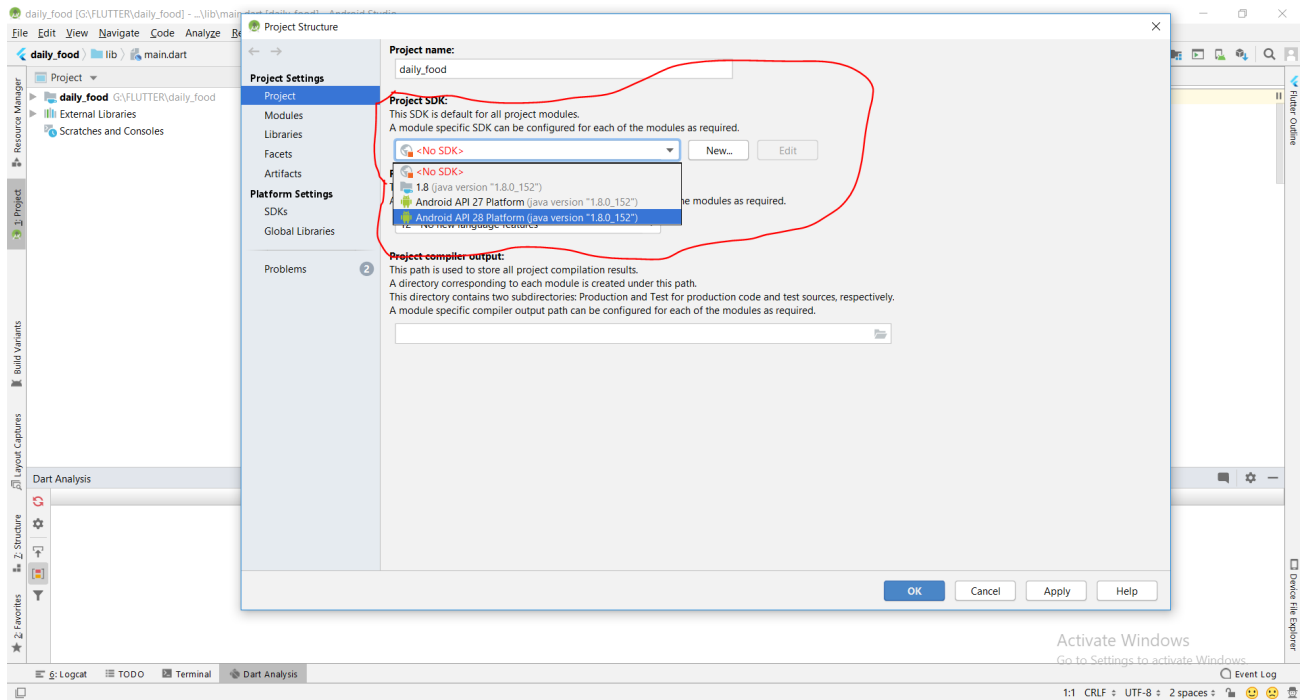

Use:

179

```
flutter config --android-sdk ANDROID_SDK_PATH
```

Or

- Device Not Found (when setting up Flutter in Android Studio)
- Project structure -> select latest Android API in Project SDK

8 By setting both the Project SDK and Module SDK fixed it. Thanks. – Shirish Kadam Jul 18 2019 at 19:06

4 This solved my issue. I had running devices, but flutter was not able to detect them. – Mahdi-Malv Jul 27 2019 at 10:07

2 Solved for me too. Thank you! – Lee Casey Oct 1 2019 at 8:30

2 Worked for me. No SDK was selected – phyyyl Dec 17 2019 at 22:33

2 Solved for me too. – fermoga Dec 19 2019 at 22:55

In iOS with Mac, when I got this error, this worked for me:

2

open -a simulators
flutter run
