Create a Tab Bar at center of the screen in flutter
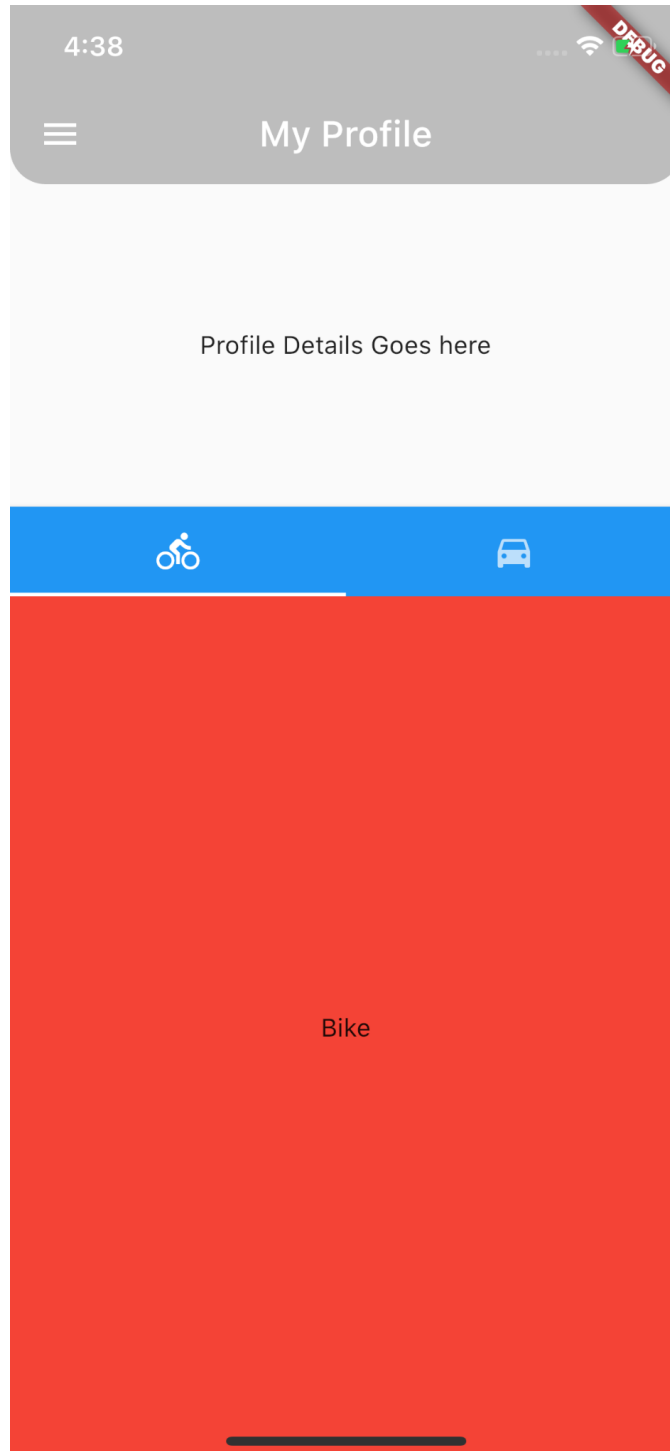

```dart
class profilePage extends StatefulWidget {
 @override
 profilePageState createState() => profilePageState();
}

class profilePageState extends State<profilePage> {

 @override
 Widget build(BuildContext context) {
   return DefaultTabController(
     length: 2,
     child: Scaffold(
       appBar: AppBar(
         title: Text(
           'My Profile',
         ),
         centerTitle: true,
         backgroundColor: Colors.grey[700].withOpacity(0.4),
         elevation: 0,
         // give the app bar rounded corners
         shape: RoundedRectangleBorder(
           borderRadius: BorderRadius.only(
             bottomLeft: Radius.circular(20.0),
             bottomRight: Radius.circular(20.0),
           ),
         ),
         leading: Icon(
           Icons.menu,
         ),
       ),
       body: Column(
         children: <Widget>[
           // construct the profile details widget here
           SizedBox(
             height: 180,
             child: Center(
               child: Text(
                 'Profile Details Goes here',
               ),
             ),
           ),
```

```dart
// the tab bar with two items
SizedBox(
  height: 50,
  child: AppBar(
    bottom: TabBar(
      tabs: [
        Tab(
          icon: Icon(Icons.directions_bike),
        ),
        Tab(
          icon: Icon(
            Icons.directions_car,
          ),
        ),
      ],
    ),
  ),
),

// create widgets for each tab bar here
Expanded(
  child: TabBarView(
    children: [
      // first tab bar view widget
      Container(
        color: Colors.red,
        child: Center(
          child: Text(
            'Bike',
          ),
        ),
      ),

      // second tab bar viiew widget
      Container(
        color: Colors.pink,
        child: Center(
          child: Text(
            'Car',
          ),
        ),
      ),
    ],
```

```
              ),
            ),
          ],
        ),
      ),
    );
  }
}
```
